

SETTING THE STANDARD

IKO makes roofing, first and foremost. It's been the sole focus of our family business for four generations. We take great pride in making time-tested, professional-grade roofing products.

IKO'S CAMBRIDGE SHINGLES

IKO's Cambridge shingles are bigger and heavier than most competitors' comparable products. Larger shingles mean increased profitability through reduced labor and material cost.

We have recently introduced our new headlap fines laminated shingles which helps ensure that our shingles lay flatter and have better contact to the sealant strip in cooler weather when the shingles are more rigid. This makes for a better looking and more functional shingle right from day one.

A wider nail line has been introduced to help guide installers for proper nail placement. Nails applied in this area ensure optimum performance of the product.

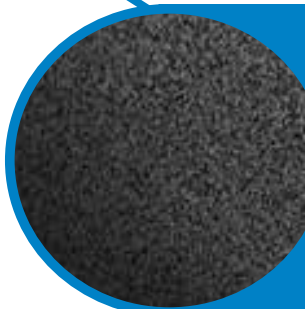

Our FASTLOCK modified bitumen sealant strip is formulated to be thicker and more aggressive to ensure immediate bond and extraordinary performance.

IKO's unique Color Blend Technology provides a consistent blending between product lines and plants, virtually eliminating do not mix situations. Our blends are also regarded as some of the most aesthetically pleasing blends in the industry.

IKO's fiberglass mat is among the heaviest in the industry.

Designed for superior tear resistance and strength, IKO's mat is the backbone of all of IKO's heavyweight shingle products.

IKO has refused to reduce back coating from our shingles. Based on our experience, we believe that back coating adds to the overall asphalt content of the shingle which ensures long term weatherability and performance of our products.
